

OPERATIONS ON DATA FRAMES

Answer

```
windmax <- function(n){ #function definition

a <- c() #creating empty vector
i = 5
while(i <= 9)
{

calc_speed <- subset(n[n$Wind == max(n[airquality$Month == i,]$Wind), ], Month == i)
a <- rbind(a,calc_speed) #populating the empty vector
i = i + 1

}

a
}

#Calling the function
windmax(airquality)
```
